

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E.

IN this volume the principle of accentuation is so applied to five-figure logarithms of Numbers as to enable calculations with them to yield results correct to five figures in Numbers, without using differences, proportional parts, or anti-logarithms.

Each logarithm is complete and separate, without any detached figures, so that the whole logarithm is seen at a glance, and this enables its cologarithm to be taken conveniently when required.

The accentuation exactly adapts every logarithm to a corresponding Number and to it alone, while using no extra figures; for instance, while the unaccented five-figure logarithms of 90591, 90592, and 90593 are identical, being '95709, the accented logarithms are '95709¹, '95709, and '95709²; the simple device of denoting mean values of 0.3, more or less, by a dot or a dash, fitting the logarithm to one Number only in any case. The doubt and hesitation and incorrectness of the ordinary mode is thus removed. The gain in exactitude of the system is clearly shown in the examples applied to numerical calculations of various sorts.

But this accentuation has also been designed with another object. It enables logarithms of trigonometrical ratios to yield more accurate results in angles. Thus, if we consider the greater portion of the quadrant, 0° to about 86°, to represent the mass of these very varying values, then the accented four-figure logarithms give results correct to minutes, the accented five-figure logarithms yield angles true to hundredths of a degree, and accented six-figure logarithms give results true to seconds; while with unaccented logarithms, five, six, and seven figures would be respectively required.

The trigonometrical portion of this book hence is applied to the centesimal division of the degree, a mode of great practical convenience for many purposes, adopted by some Continental scientific men and also by the American savants, who have greater facility than ourselves in utilising improved methods. In England, where minutes and seconds maintain their almost exclusive hold, this portion of the book may be less used, and will probably be applied mostly in surveying and engineering work, when five correct figures in result are sufficient, and rapidity is advantageous; but the logarithms of Numbers will become a necessity for all who calculate in five figures and wish to do so with the least labour and utmost convenience. The saving of figures, of time, and of risk of error in extensive calculations is large.

The triplet arrangement of lines of figures, both ways, secures immunity from one class of errors in reading, and the dispensing with proportional parts, practicable in most ordinary work with these tables, is a corresponding advantage.

The remarks made in the Preface and Introduction of my former work, "Accented Four-figure Logarithms and other Tables," also apply correspondingly to the use and accentuation of Five-figure Logarithms as far as regards general principles and methods. It will therefore be needless to repeat them here at full length.

L. D'A. J.

London, *December*, 1879.

INTRODUCTION.

THE ACCENTUATION OF LOGARITHMS.

THE common logarithm of a complete number is almost invariably expressed, as regards its mantissa, by a large number of figures whenever completion or full expression is desired. Thus, the logarithm of 15140, a Number perfectly complete in itself, may be expressed by—

3.180 125 875 164

and even then the logarithm is incomplete, as it should, to ensure completeness, be extended until all figures after the last significant digit become cyphers.

Taking, then, the mantissæ of logarithms generally to be interminable, the first point for consideration is, how many figures should be used in the mantissa? and the second, how can the tail or the remaining figures be best expressed?

It appears from the experience of the past that seven-figure logarithms alone were in practical use for ordinary purposes for a great number of years, but that latterly four-figure logarithms, originally used by the French, have been found sufficient to answer a great number of the purposes of ordinary calculation; the presumed advantage of such short logarithms being that about half the time spent on any calculation with seven-figure logarithms is thereby saved, also that the risk of error is diminished by half.

The reason that seven-figure and four-figure logarithms have thus been specially adopted, apart from the foregoing advantage, are that seven-figure logarithms enable seconds of arc to be obtained throughout the greater part of the quadrant, and that four-figure logarithms were supposed to enable calculations to give correct results to four figures in Numbers, a common accepted limit for the factors and results required in ordinary short calculations. It was also supposed that similarly five-figure logarithms could be employed to deal with numbers expressed in five figures, and yield results in five figures without important error.

For the higher purposes of the astronomer and of the scientific man, long logarithms are doubtless frequently necessary, as he requires results to hundredths of a second in some cases; but a great number of astronomical calculations can be done with four-figure logarithms; for the computers in the Nautical Almanac Office can calculate the whole of their occultations, almost all their eclipses, and all the places of the stars, excepting circumpolar stars, with four-figure trigonometrical logarithms, giving minutes of arc; they have not hitherto done so for want of such tables.

Again many astronomical calculations, such as the clearing of a lunar distance, may be so transformed in method as to admit of being done with minute tables. An example of this is given attached to "Accented Four-figure Logarithms."

The calculations of ordinary topographical survey, or of engineering survey, seldom require greater exactitude than 30 seconds, or perhaps 20 seconds; for much of their work four-figure logarithms to minutes would suffice; for the remainder, which certainly does not require exactitude to seconds, five-figure logarithms arranged to suit the centesimal division of the degree, that is, giving trigonometrical functions to every hundredth of a degree, would appear to be the most convenient and concise arrangement.

Lastly, for students who waste an enormous amount of time with their mistakes, and reduction of proportional parts and differences in seven-figure logarithms (still adhered to in schools), short logarithms, giving results by inspection either in four or in five figures, would be an important gain, representing months of educational time saved for better purposes.

Seven-figure logarithms are required for special purposes only, and when the whole of the seven figures can be utilised; their employment with differences for other purposes is waste of time and labour.

Next, as regards ordinary four-figure logarithms, and more especially the principle involved in attempting to use them with the object of getting results correct to four figures in Numbers. This has been shown in the examples attached to "Accented Four-figure Logarithms" to be fallacious. Practical men that attempt to use them in ordinary numerical calculations complain justly of the great defect, that in as many cases as not, the results are inaccurate; the fourth figure in Numbers being liable to be as much as 4 too much or too little, while whether it is so or not is a mere chance dependent on the balancing or non-balancing of small involved errors in the detail of the working of each example. The practical man, being told that in a long series of cases all such errors in results may balance each other on the whole, is not satisfied, and failing to obtain correct results in every case, while annoyed by the perpetual liability to error, looks on four-figure logarithms as a delusion.

An exactly corresponding liability to error exists in attempting to use five-figure logarithms for obtaining results correct to the fifth figure in Numbers; the attached examples demonstrate this clearly, and the list of errors following them, accompanied by those shown with seven-figure logarithms, should convince the most sceptical.

The remedy for this defect as regards four figures has been already given in accented four-figure logarithms, which enable the fourth figure in Numbers to be obtained with precision; while the corresponding remedy as regards five figures is offered in this book, which enables the fifth figure in Numbers to be obtained accurately. There are a few very special cases, such as those involving compound interest for a long term of years, and some others, not suited to five-figure computation at all, in which this accuracy cannot be expected: apart from those, the exactitude in the last figure is undoubted.

The cause of the defect, before referred to, is evidently the neglect of the tail, or rejected figures of the mantissa of the logarithm; and to investigate this neglect, the subject of augmentation and accentuation must be brought into consideration.

If the tail of the mantissa of a logarithm be simply cut off, and the logarithm be represented merely by the retained figures, as

$$\begin{array}{rcl} 3.180\ 125\ 875 & \text{by} & 3.18012 \\ 3.299\ 289\ 334 & \text{by} & 3.29928 \end{array}$$

and so forth; the utilised or retained portion is a low value of the logarithm; the error is thus left entirely in one direction, and its amount cannot exceed 1 in the last place of the retained figures.

But on adopting the principle of augmentation, which is in general use, the last of the retained figures is augmented by 1 whenever the first of the rejected figures is a full 5 or more than 5; thus the tail of the logarithm may or may not be partially expressed, as we represent

$$\begin{array}{rcl} 3.180\ 125\ 875 & \text{by} & 3.18013 \\ \text{and } 3.180\ 134\ 763 & \text{by} & 3.18013 \end{array}$$

Under these circumstances the retained portion of the logarithm is nearer to exactitude than in the former case, as the error cannot be more than $\frac{1}{2}$ of a unit in the last place; but it is always doubtful whether the error is plus or minus, and the limit of variation of the error still amounts to 1 as in the former case.

A further step towards exactitude is adopted by some writers through distinguishing an augmented from an unaugmented final figure by a mark thus,

$$\begin{array}{rcl} 3.180\ 125\overset{\cdot}1 & \text{by} & 3.18013 \\ 3.180\ 130\overset{\cdot}2 & \text{by} & 3.18013 \end{array}$$

the dash under the final figure indicating its real weakness. When this principle and method is adhered to, not only is the actual error less than $\frac{1}{2}$ of a unit in the last figure, but the limit of variation of error is $\frac{1}{2}$, instead of being 1. In other words the rejected unrepresented tail of the logarithm must under these circumstances be less than 0.5 while its mean value is 0.25, and the presence or absence of the mark of augmentation informs us whether it is plus 0.25 or minus 0.25. Thus the mean values of

$$\begin{array}{l} 3.18013 \text{ are } 3.1801275 \\ \text{and } 3.18013 \text{ and } 3.1801325 \end{array}$$

and the former quantities indicate to us the latter values for use.

This method of *marked* augmentation is not common in England, where the former plan of *unmarked* augmentation is the general rule; both of these methods seem well suited to Numbers, and to Napierian logarithms, but are very deficient when applied to common logarithms, on account of their not representing the tail of the logarithm with sufficient exactitude. For example, in a table of five-figure logarithms with marked augmentations we should find

$$\begin{array}{rcl} \log. 88637 & \text{to be} & .94762 \\ \log. 88638 & \text{,,} & .94762 \\ \log. 88639 & \text{,,} & .94762 \end{array}$$

That is, the logarithms of two numbers are identical, a very false ground for starting on any calculation; which would not only directly affect the cases in which such numbers were used, but also be liable to throw out error anywhere, as the false principle would undermine the whole.

Also, in the same way, the method of unmarked augmentation applied to logarithms of numbers is considerably more defective, for with unmarked augmentations, we should find in a table of five-figure logarithms

log. 43981 to be 64327

log. 43982 „ 64327

and the error would directly affect numbers employed between about 43500 and 99999 in any calculation, that is, more than half the table; and indirectly, that is, in the working of any calculation introducing any one such number, all results would be liable to be vitiated from the introduction of this false principle.

The results that happened to be correct, after introducing such numbers, would be termed lucky results, dependent on the chance counterbalancing of errors in the detail of working. Such chances are about equal; that is, half of the results are likely to be right and half of them wrong. It is unfortunate that so many persons have been led to believe the errors referred to invariably, or in a great preponderance, counterbalance. Apart from the desire that they should do so, there is no reason whatever for that belief. It is extremely easy for anyone to say that they do not *find* any errors in *their* calculations when conducted on that principle; the fact is they do not *look for* the errors, or test the series of their results, but they do base their assumption of exactitude on a few correct results. In a case within personal experience 100 examples were worked out on the trusting-to-luck principle, and 62 of them were incorrect in result, this being solely due to errors of this class. One cannot hoodwink oneself in face of facts like these.

A preferable plan is to use accents which exactly fit logarithms to their separate numbers singly, thus entirely abolishing errors of this sort.

Thus, if we denote

log. 88637 by 94762[^]

log. 88638 by 94762

log. 88639 by 94762_.

all ambiguity is avoided; so also if we denote

log. 43981 by 64327[^]

log. 43982 by 64327_.

and carrying out this principle throughout the whole table of logarithms, they become accurately fitted to numbers, and may be dealt with as curtate.

The two signs, the dash and the dot, have the same mean value, one being 0.3 less, the other 0.3 more than the firm plain number, while the plain number represents itself in mean value. This very simple arrangement of decimal accentuation is very easily applied in practice, while no other mode can be devised that will possess exactly the same, or any higher, advantages.

The values of accented final figures tabulated are as follow ; and a set of ten examples, comparing the results of accented logarithms, both with those obtained through unaccented logarithms and through seven-figure logarithms, is also given attached.

ACCENTED FINAL FIGURES OF LOGARITHMS.

Mode of Accentuation.		Final figures.	Mean values.
		0	= 0
		0.	= 0,3
		0̇	= 0,7
		1	= 1
		1.	= 1,3
		1̇	= 1,7
		2	= 2
		2.	= 2,3
		2̇	= 2,7
		3	= 3
		3.	= 3,3
		3̇	= 3,7
		4	= 4
		4.	= 4,3
		4̇	= 4,7

		9̇	= 9,7
		0	= 0

Complete Set of Final Figures.

The values given here are *mean values* of the whole set of accented final figures of logarithms that can possibly occur.

In them it will be seen that, when an accented final figure is reduced to its mean value without using an accent, it must be either diminished by 0,3 or increased by 0,3 ; in the former case it is marked by a dash above it, in the latter case by a dot beneath it.

This rule can be learnt in five minutes, and practised after applying it in five examples.

COMPUTATION WITH ACCENTED LOGARITHMS.

In working with accented logarithms, the accent is hence invariably treated as a 0,3 either in excess or deficiency. In picking out a final logarithm from the tables the nearest tabular logarithm is used, in order to get five correct figures in Numbers, but if the true logarithm happens to be exactly intermediate, it is then necessary to use a sixth figure in Numbers, which in such a case is invariably a 5 ; but this does not occur very often.

In taking out accented cologarithms of a Number, when the accented logarithm of that Number is found in the table, the usual plan is to subtract the characteristic from -1 , and all the figures of the mantissa successively from 9, beginning from the left ; the last significant digit in the mantissa is, however, exceptional, and is subtracted from 10. As regards final accent, a dashed logarithm has a dotted cologarithm, and the converse, while a plain logarithm has a plain final figure also in the cologarithm.

For example:

Number.	Logarithm.	Cologarithm.
1	$\begin{pmatrix} .00010 \\ 1.9999 \end{pmatrix}$	
90534	$\begin{array}{r} 4.95681. \\ \hline 5.04319 \end{array}$	$\bar{5}.04319$
90.763	1.95791	$\bar{2}.04209$
0.90916	$\bar{1}.95864$	0.04136

Most ordinary logarithmic calculations resolve themselves into adding up five, or at the utmost six, logarithms and cologarithms at a time, or in raising numbers to powers not exceeding the fifth or the sixth by multiplying their logarithms by 5 or 6.

Under these practical limits accented logarithms give correct results; for higher powers auxiliary tables with a few long logarithms would be required.

The reason in support is this:—The error involved in any single case of accent is half an accent, or 0.2; five of these all falling in one direction without counterbalancing in the detail of work at all would amount to 1.

The accentuation is hence suited to practical requirements.

For those that are vociferous regarding their own results achieved with simple five-figure tables of unaccented or unaugmented logarithms, carried to five places in Numbers; let them find the square of 65, or multiply 3, 6, 9 and 39 together by means of five-figure logarithms taken separately, try to get results correct in the *fifth figure* in Numbers, and check by simple multiplication. A few such simple examples in which errors happen not to counterbalance, but to mount up, will be more demonstrative to the individual working them himself, than any quoted examples however carefully drawn up or printed; and they will inevitably draw him to the conclusion that in working for results in four figures of Numbers accented four-figure logarithms should be used, and that in working for results in five figures of Numbers accented five-figure logarithms should be employed, excepting in cases where the calculator is indifferent as to his last figure being correct, that is to say, when mental calculation answers all his purposes.

EXAMPLES COMPARING UNACCENTED WITH ACCENTED FIVE-FIGURE LOGARITHMS.

Example I.—Required $91.591 \times 51.412 \times 9.783$

	Unaccented Five.	Accented Five.	Seven Figures.
log. 91.591 =	1.96185	1.96185.	1.9618528
log. 51.412 =	1.71106	1.71106.	1.7110645
log. 9.783 =	.99047	.99047.	.9904721
	$\hline 4.66338$	$\hline 4.66339$	$\hline 4.6633894$
Results	46066	46067	46067

Error of 1 too little.

Example II.—Required $(88.441)^2 \times (4.842)^3$

	Unaccented Five.	Accented Five.	Seven Figures.
log. 88.441 =	1.94665 2	1.94665 ₂	1.9466536 2
	3.89330	3.89331 ₂	3.8933072
log. 4.842 =	0.68502 3	0.68502 ₃	0.6850248 3
	2.05506	2.05507	2.0550744
	5.94836	5.94838 ₂	5.9483816
Results	887890	887930	887940

Error of 40 too little, or 4 in the fifth figure.

Example III.—Required $(43.6)^3$

log. 43.6 =	1.63949 3	1.63949 ₃	1.6394865 3
	4.91847	4.91846	4.9184595
Results	82884	82882	82882

Error of 2 too much.

Example IV.—Required the amount of £54 10s. at 6 per cent. after 30 years, interest payable yearly. $A = PR^n$.

log. 1.06 =	0.02531 30	0.02531 ₃₀	0.0253059 30
	0.75930	0.75921	0.7591770
log. 54.5 =	1.73640 2.49570	1.73640 ₂ 2.49561 ₂	1.7363965 2.4955735
Results	£313.11	£313.045	£313.02

Error of $6\frac{1}{2}$ too much at the fifth figure.

Example V.—Required the value of 760 tons of cast iron at £7 4s. per ton.

log. 7.2 =	0.85733	0.85733 ₂	0.8573325
log. 760 =	2.88081 3.73814	2.88081 ₂ 3.73815 ₂	2.8808136 3.7381461
Results	5471.9	5472.0	5472.0

Error of 1 in the fifth figure.

Example VI.—Reduce $\frac{(48.61 \times 87.2)^3}{43.2 \times 0.573}$

	Unaccented Five.	Accented Five.	Seven Figures.
log. 48.61	1.68673	1.68673 [^]	1.6867256
log. 87.2	1.94052	1.94052 [^]	1.9405165
	<hr/> 3.62725	<hr/> 3.62724.	<hr/> 3.6272421
	2	2	2
log. dividend	7.25450	7.25449 [^]	7.2544842
log. 43.2	1.63548	1.63548.	1.6354837
log. 0.573	1.75815	1.75815.	1.7581546
log. divisor	1.39363	1.39364 [^]	1.3936383
colog. divisor	2.60637	2.60636.	2.6063617
	5.86087	5.86085	5.8608459
Results	725890	725855	725850

Error of 35 too much, or $3\frac{1}{2}$ in the fifth figure.

Example VII.—Required (695)³.

log. 695	2.84198	2.84198.	2.8419848
	2	2	2
	<hr/> 5.68396	<hr/> 5.68397 [^]	<hr/> 5.6839696
Results	483010.	483020.	483025.

Error of 10, or 1 too much in the fifth figure.

Example VIII.—Reduce $\frac{497 \times 81 \times 75.5}{0.9 \times 82}$

log. 497 =	2.69636	2.69636 [^]	2.6963564
log. 81	1.90849	1.90849 [^]	1.9084850
log. 75.5	1.87795	1.87795 [^]	1.8779470
colog. 0.9	0.04576	0.04576 [^]	0.0457575
colog. 82	2.08619	2.08619 [^]	2.0861861
	<hr/> 4.61475	<hr/> 4.61473.	<hr/> 4.6147320
Results	41186.	41184.	41184.

Error of 2 too much in the fifth figure.

Example IX.—Required the value of 703 tons English of material delivered in France to be paid for at the rate of £8 15s. per French ton; which is 0·9842 tons English.

These errors are here expressed in simple units, but might be in tens or hundreds according to the positions of the decimal point in the example. None of the errors demonstrated by the use of the accented five-figure logarithms are greater than those shown with the seven figures, hence no exaggeration of error can exist.

One example, an exceedingly extreme one, shows an error of 9 in the fifth place in the unaccented results; and this is the only one that shows any error amounting to 1, or more than 1, in the accented results; here the error is $2\frac{1}{2}$, and in this case affords a useful indication as to the exactitude of accented logarithms and the limits up to which they may be used without any error at all. A 30th power is evidently beyond them.

The errors proved above are an important defect in unaccented logarithms when used to the same number of figures as the numbers used and required in results.

Such errors do not exist in *every* example that may be brought forward; some examples will be free from them, that is whenever no number is employed above 40000 throughout the whole of it, and whenever the errors chance to balance each other in the detail of the working. When the former is the case, such unaccented logarithms are merely auxiliary, and not a complete set for working up to 99999, they are correct under special low limits only. As to the chance of errors balancing each other in other cases, it is probably about an even chance whether any error is thrown out or is balanced. The uncertainty of employing such logarithms as may cause about half the calculations made with them to give seriously incorrect results in the last figure is excessively annoying. This defect is remedied by the use of accents.

COMPARISON OF FRENCH AND ENGLISH DECIMAL SCIENTIFIC SYSTEMS AT 32° AND 39° FAHRENHEIT IN VACUO.

ENGLISH SCIENTIFIC UNITS.		In English Commercial Units at 62° and 39° Fahr.	French Scientific Equivalent.	FRENCH SCIENTIFIC UNITS.		In English Commercial Units at 62° and 39° Fahr.	English Scientific Equivalent.
LENGTH.				LENGTH.			
Foot	= 10 tenths (or tenths)	1.00029 foot	0.304 79 mètres	Mètre	= 10 décimètres	3.281 83 feet	3.280 90 feet
Rod	= 10 feet	3.33 130 yards	3.047 95 mètres	Décimètre	= 10 mètres	1.988 99 pole	3.280 90 rods
Chain	= 10 rods	6.062 36 poles	3.047 95 décamts.	Hectomètre	= 10 décimètres	0.497 25 furlong	3.280 90 chains
Cable	= 10 chains	0.151 56 furlong	3.047 95 hectmtrs.	Kilomètre	= 10 hectomètres	0.621 56 mile	0.328 08 leagues
League	= 10 cables	1.894 49 mile	3.047 95 kilomtrs.	Myriamètre	= 10 kilomètres	6.215 60 miles	3.280 90 leagues
SURFACE.				SURFACE.			
Square Foot	= 100 sq. tenths	1.000 57 sq. ft.	9.288 97 déc. car.	Centim. car.	= 100 centim. car.	0.155 09 sq. in.	0.107 64 sq. tenths
Square rod	= 100 sq. feet	0.3.752 sq. pole	9.288 97 mèt. car.	Mètre Carré	= 100 décim. car.	15.509 42 sq. in.	10.764 30 sq. tenths
Square chain	= 100 sq. rods	0.918 80 rod	9.288 97 ares	Are	= 100 mètres car.	10.770 43 sq. ft.	10.764 30 sq. feet
Square cable or century	= 100 sq. chains	22.969 91 acres	9.288 97 hectares	Hectare	= 100 ares	0.098 902 rood	10.764 30 sq. rods
Square league	= 100 centuries	3.589 05 sq. miles	9.288 97 kil. carrés	Kilomètre car.	= 100 hectares	2.472 55 acres	10.764 30 sq. chains
CAPACITY.				CAPACITY.			
Fluid mil	= 1000 fl. doits	0.478 78 minim	28.315 31 mill. cub.	Millilitre	= 1 centim. cube	16.909 82 minims	35.316 58 fluid mila
Fluid ounce or cubic tithe	= 1000 fl. mils	1.729 03 cub. in.	28.315 31 cent. cub.	Litre	= 1 décim. cube	61.079 33 cub. in.	35.316 58 fluid oza.
Cubic Foot	= 1000 fl. ounces	1.000 06 cub. foot	28.315 31 déc. cub.	Décalitre	= 10 litres	2.201 80 gallons	0.353 17 cubic ft.
Cubic rod	= 1000 cubic feet	27.068 92 cub. yds.	28.315 31 mèt. cub.	Hectolitre	= 10 décalitres	2.752 25 bushels	3.531 66 cubic ft.
WEIGHT.				WEIGHT.			
Mil	= 1000 doits	0.436 87 grain	28.315 31 millgr.	Milligramme	= 1000 milligr.	0.015 432 grain	35.316 58 doits
Ounce (milliesimal)	= 1000 mils	0.988 79 ounce	28.315 31 grammes	Gramme	= 1000 milligr.	15.432 349 grains	35.316 58 mils
Foot-weight or talent	= 1000 oz.	62.424 54 lbs.	28.315 31 kilogr.	Kilogramme	= 1000 grammes	2.204 621 lbs.	35.316 58 ounces
Rod-weight	= 1000 fwt.	27.688 10 tons	28.315 31 milliers	Quintal	= 100 kilogr.	1.988 412 cwt.	3.531 66 fwt.
				Millier	= 1000 kilogr.	0.984 206 ton	35.316 58 fwt.

COMPOUND UNITS.

PRESSURE.	French Scient. Equiv.
1 talent (or foot-weight) per square foot	= 304.794 5 kilog. per mèt. car.
1 talent per square foot	= 0.304 79 45 kilog. per cent. car.
1 talent (or foot-weight) per square tithe	= 30.479 45 milliers per mèt. car.
1 talent per square tithe	= 0.003 048 milliers per cent. car.
1 rod-weight per square foot	= 304.794 5 milliers per mèt. car.

IRRIGATION.	
1 cubic tithe per square chain	= 0.304 794 litres per hectare.
1 cubic foot per square chain	= 0.304 794 mèt. cub. per hectare
1 cubic foot per century	= 0.003 048 mèt. cub. per hectare
1 cubic rod per century	= 3.047 945 mèt. cub. per hectare

POWER AND WORK.	
1 foot-talent	= 8.630 354 2 kilogrammètres
1 h.-p. = 328 foot-talents per minute	= 1.012 63 c.-v. force de cheval

HEAT AND ELECTRO-MAGNETISM.	
1 foot-mil	= 0.008 630 35 mètre-grammes
1 foot-ounce	= 8.630 354 mètre-grammes.

SIMPLE AND COMPOUND UNITS OF REDUCTION.

English into French.	
Simple	0.304 794 484 Cubic
Square	0.092 899 683 Fourth power
	0.028 315 312
	0.008 630 354

COMPOUND UNITS.

PRESSURE.	English Comm. Equiv.
1 talent (or foot-weight) per square foot	= 62.387 089 pounds per sq. foot
1 talent (or foot-weight) per square tithe	= 55.702 76 cwt. per sq. foot
1 rod-weight per square foot	= 27.851 38 tons per sq. foot

IRRIGATION.	
1 cubic tithe per square chain	= 7.529 67 cub. in. per acre.
1 cubic foot per square chain	= 4.357 45 cub. ft. per acre

POWER AND WORK.	
1 foot-talent	= 68.443 287 foot-pounds
1 h.-p. = 328 foot-talents per minute	= 0.899 077 h.-p. commercial

HEAT AND ELECTRO-MAGNETISM.	
1 foot-mil	= 0.487 101 foot-grains

COMPOUND UNITS.

PRESSURE.	English Scient. Equiv.
1 kilogramme per mètre carré	= 0.003 280 9 talents per sq. foot
1 kilogramme per décim. carré	= 0.328 090 talents per sq. foot
1 kilogramme per centimètre carré	= 0.328 089 9 talents per sq. tithe
1 millier per mètre carré	= 3.280 899 talents per sq. foot
1 millier per décim. carré	= 3.280 899 talents per sq. tithe
1 millier per centimètre carré	= 32.808 990 rod-weight per sq. ft.
" " " "	= 328.089 90 talents per sq. tithe

IRRIGATION.	
1 litre per hectare	= 3.280 899 cub. tenths per sq. ch.
1 mètre cube per hectare	= 3.280 899 cub. ft. per sq. chain
" " "	= 328.089 9 cub. ft. per century
" " "	= 0.328 090 cub. rods per century

POWER AND WORK.	
1 kilogrammètre	= 0.115 870 foot-talents
1 cheval-vapeur = 4500 kilogram-mètres per minute	= 0.987 528 h.-p. (scientific)

HEAT AND ELECTRO-MAGNETISM.	
1 mètre-gramme	= 115.870 154 foot-mils
" "	= 0.115 870 foot-ounces.

SIMPLE AND COMPOUND UNITS OF REDUCTION.

French into English.	
Simple	3.280 899 Cubic
Square	10.764 290 Fourth power
	35.316 581
	115.670 145

COMPOUND UNITS.

PRESSURE.	English Comm. Equiv.
1 kilogramme per mètre carré	= 0.204 692 lbs. per sq. foot
1 kilogramme per décim. carré	= 20.469 2 lbs. per sq. foot
1 kilogramme per centim. carré	= 18.276 0 cwt. per sq. foot
1 millier per mètre carré	= 1.827 610 cwt. per sq. foot
1 millier per centimètre carré	= 6.345 87 tons per sq. inch

IRRIGATION.	
1 litre per hectare	= 24.703 14 cub. in. per acre
1 mètre cube per hectare	= 14.295 8 cub. feet per acre

POWER AND WORK.	
1 kilogrammètre	= 7.235 187 foot-pounds
1 cheval-vapeur = 4500 kilogram-mètres per minute	= 0.986 616 h.-p. commercial

HEAT AND ELECTRO-MAGNETISM.	
1 mètre-gramme	= 50.646 4 foot-grains.
